EDUCATION

B.E Computer Science and engineering

Anna University
2018 - 2022

12Th

Government boys higher Secondary school
2016-2018

SKILLS

- Java
- HTML
- CSS
- JAVASCRIPT
- REACT JS
- GIT
- SPRING BOOT
- MYSQL

IDE

- VS CODE
- INTELIJ
- WORKBENCH

LANGUAGES

- ENGLISH
- TAMIL

ABOUT ME

Jr. Software Developer from Cognizant Technology Solutions, specialized in React.js and Full-stack development. Enhancing user experience and software performance, demonstrating strong problem-solving and client support skills. Proven track record in boosting web application accessibility and efficiency through innovative coding and debugging techniques.

WORK EXPERIENCE

JR. SOFTWARE ENGINEER

JAN-2022-SEP-2024

COGNIZANT TECHNOLOGY AND SOLUTIONS

- Worked in a Transportation and Logistics Project Experience in handling the newest React features centralized with hooks and followed the higher-order component to improve component reusability
- Created features to enhance the user experience while ensuring that the web application is optimized with the maximum accessibility
- Experience in implementing the component life cycle architecture, store actions to handle real time data, installing react router
- Examine logs and database records to address any problems users may have had using the online app or making withdrawals
- Examine and rectify problems by going back through the code and applying the required fixes, regardless of whether they are caused by code errors or other causes
- Enhanced software performance by identifying and fixing bugs through thorough testing and debugging processes.
- Provided technical support to clients, resolving issues in a timely manner while maintaining strong customer relationships.

PROJECTS

Online food ordering system

Technology HTML, CSS, JavaScript

Description: Online food ordering system is a web-based application that allows to order food online. The system can help restaurants manage their operating costs, attract and retain customers, and streamline their inventory management. The system can be designed to manage the details of item categories, food, delivery addresses, orders, and shopping carts

Automated Mail Alert System

Technologies Used: Java, Spring Boot, MySQL, Excel

Description: Developed an automated mail alert system designed to enhance business efficiency by organizing data and sending email alerts based on specific triggers. The system utilizes Java and Spring Boot for the backend, with data stored in a MySQL database. It processes data stored in Excel, identifies conditions that meet the defined triggers, and sends timely and accurate email notifications to relevant employees.
